

Maria P. Limberis is a Research Associate Professor in the Department of Medicine at the University of Pennsylvania (Penn). She received her BSc with Hons in Biochemistry from the Liverpool John Moores University in the United Kingdom and her PhD in Molecular Biology from the University of Adelaide in Australia. Her graduate work focused on the development of lentivirus-based gene therapeutics for cystic fibrosis (CF). In 2003-2007 she conducted her post-doctoral studies in the laboratory of James M. Wilson where she investigated novel airway-directed gene therapies for CF. In 2008, she joined the Penn faculty and is currently a Research Associate Professor at the Department of Medicine. Dr. Limberis has also developed an innovative vectored vaccine strategy for a rapid and effective prophylaxis against airborne infectious viruses that is now being developed for influenza and more recently for COVID-19. Dr. Limberis is a voting member of the Institutional Animal Care and Use Committee and the Medical Faculty Senate Steering Committee at Penn. Dr. Limberis is an associate editor of the *Human Gene Therapy* Journal.
